Headquartered in The Woodlands, Texas, TETRA Technologies, Inc., is a geographically diversified oil and gas services company focused on fluids, compression, production testing, and offshore, and has been serving the industry for over 35 years. Our business has evolved based on our customer-focus and our ability to develop innovative solutions and deliver the highest quality products and exceptional customer service.

TETRA began in 1981 as a pioneer in the completion-fluids industry. We are the leading worldwide producer and marketer of calcium chloride with six North American and three European production facilities. In addition to being a major supplier to the oil service industry, TETRA supplies calcium chloride to a wide variety of industries such as food production, agriculture, road deicing and industrial.

To secure a guaranteed resource for its customers, we invested in the first clear brine fluid manufacturing facility dedicated to the oil and gas industry. Today, TETRA offers customized, cost-effective formation-specific fluids with supply assurance so clients know that they can get what they need, when they need it no matter the volume. Providing engineering support along with filtration and wellbore clean-up tools we can handle any operator's completion needs.

We offer our customers innovative and cost-effective frac water-management solutions, including treatment, transfer and storage. TETRA manages the entire lifecycle, keeping frac water reusable while utilizing technology, equipment and best practices that respect the environment. With one of the industry's largest fleet of onshore flowback well-testing equipment plus an extensive international fleet, TETRA has amassed a complete inventory of well-testing technology and equipment that optimizes production through improving reservoir performance.

We supply compression equipment and services through, CSI Compressco a market leader with over 1 million horsepower in our compression services fleet and packaging capabilities from 20 Hp to 8,000 Hp. We engineer and fabricate a wide-range of compressor and pump packages for global markets and ship throughout the world.

And when the day comes when your well runs dry, we are still the people to call for well abandonment and decommissioning services.

Since our inception, TETRA has had one goal to create new and innovative products designed to add value and provide a competitive advantage to our customers. ■
