Cat engines have been the driving force behind the majority of the world's drilling, production, well stimulation and gas compression applications for years. That's experience you won't find anywhere but Caterpillar. Headquartered in Houston, Texas, Caterpillar Oil & Gas has manufactured engines for the oilfield since the 1930s. As the oil and gas industry has evolved, so have we, steadily delivering timely, innovative and efficient products and services that can always be relied on to perform. Today we provide premier power solutions with outputs from 31 to 16,000 kW, ranging from small gas generator sets for land production to large powerhouse engines for offshore drilling. For Caterpillar, the driving force behind our expanding business is to offer more to our customers. More pow-

er, more flexibility, more value. With that in mind, we've broadened our product portfolio to include well stimulation pumps and fluid ends for the well service market, as well as electric motors for gas compression. We've introduced industry-leading dual fuel technology to power our customers to efficiency, fuel flexibility and a better bottom line. And we're equipping our products with intelligent equipment management solutions such as Product Link to optimize performance.

Along with industry-leading performance, Cat power solutions come with industry-leading support. The Cat dealer network, with more than 2,200 outlets, is the largest and most responsive in the world. Caterpillar expertise and genuine parts follow Cat equipment where it's working. ■
