AXON Energy Products is a global oilfield equipment manufacturer, engineering provider and aftermarket service company that is committed to technology-focused product growth. The firm employs a tactic that entails Reviewing, Reacting, Rethinking and Redesigning (R⁴) to continually evolve for its customers. In 2013, AXON established an R&D facility (Gateshead, UK) with a dedicated incubator of experienced engineers to further expand its focus on new product

development. This concentrated approach streamlines the R&D process for AXON's diverse product groups, significantly reducing the amount of time required between concept design and market release. At the 2015 Offshore Technology Conference, the company displayed a sampling of new products, such as its 250T electric top drive, electric drilling choke, replacement frac fluid ends, pipe centering shear rams, and the world's first worm-gear drawworks. ■
