For more than 80 years, CRC-Evans Pipeline International has been a pioneer in its field and today is the largest manufacturer of specialized pipeline construction and automatic welding equipment in the industry. Known for providing state-of-the-art pipeline construction equipment, automatic welding systems, managed subsea services, field joint coating, weighting systems and nondestructive testing, CRC-Evans also engineers laybarge equipment, conveying systems and concrete-weight coating plants.

Headquartered in Houston with offices and facilities throughout the world, CRC-Evans employs the talent and experience of technicians and engineers worldwide and maintains a large fleet to support its customer base onshore and in the subsea pipeline industry.

Notably, in 2010, CRC-Evans became a Stanley Black & Decker company, which has enabled the company to make significant investments in its people, focus on new product developments that increase productivity and reduce costs and increase its commitment to customer service.

With worldwide experience operating in diverse site conditions, providing practical and innovative solutions to meet project requirements and supporting them with extensive project management experience, CRC-Evans focuses on helping customers meet challenges through technological innovation and superior service, which includes having personnel at the project site within 24 hours if needed. In everything, CRC-Evans combines equipment, service and technical support to deliver a proven pipeline-construction process that boosts efficiency, improves reliability and increases productivity—anywhere on earth.

Since its inception, CRC-Evans has provided equipment and services for more than 50,000 miles of pipelines in more than 100 countries in some of the most extreme conditions and difficult terrains. With its regional capabilities around the world, CRC-Evans provides one of the most extensive support structures in the industry. Whether onshore or offshore, no matter the need or location, CRC-Evans designs custom solutions that address every aspect of construction, rehabilitation and maintenance. ■
