## INVESTIGATING THE EARTH

"Fugro is a diversified technological leader in the oil and gas industry with endeavors across multiple continents. Our passion for innovation and technology not only propels Fugro forward as a company, but also creates opportunity for personal growth and career advancement for our employees." Ed Saade President, Fugro (USA) Inc. and Regional Director, Fugro Survey Division Americas Region

Exploring the earth for more than 50 years, Fugro is the world's largest integrator of geo-technical, survey, subsea and geosciences services specifically designed to support engineering design and large structure building projects. Fugro also creates value by acquiring and interpreting earth and engineering data that assist in the design, construction, installation, repair and maintenance of large engineering infrastructures around the globe: predominantly in the oil and gas, sustainable energy and infrastructure markets, both offshore and onshore.

Founded in 1962, Fugro is headquartered in Leidschendam, the Netherlands, with a presence around the globe in more than 70 countries, including offices, laboratories, research and development centers and consultancy and advisory centers. In 2014, Fugro generated €2.6 billion in revenue and employed more than 13,500 people.

In addition to supplying people, equipment, expertise and technology that support the exploration, development, production and transportation of the world's natural resources, Fugro provides the technical data and information—from project preparation through to data acquisition, processing, analysis and interpretation, reporting and consulting—required to design, construct and maintain structures and infrastructures in a safe, reliable and efficient manner.

Fugro aims to de-risk major investment decisions by providing information and advice about locating and building foundations for production platforms, wind farms, large buildings and infrastructures, as well as strengthening levees. Fugro also undertakes the related inspection, maintenance, repair, installation and light-construction support services. Often offered in combination to help clients achieve optimum results, Fugro's services are mostly provided locally while being supported by a global knowledge base and resource pool of experienced personnel.

Notably, Fugro operates as an independent service provider and has no commercial or direct interests in the projects of its clients. As it is often involved in the early exploration and development phases of potential projects, Fugro prides itself on maintaining essential confidentiality.

Striving to achieve strong market positions, Fugro uses in-house-developed technologies, high-value services and a strong international and regional presence. Work is undertaken in locations around the globe with diverse operating environments that require a wide range of services. To give clients full support, Fugro has built up a large, regionally organized global network of offices and facilities, believing cross-divisional cooperation is key to providing services on a consistent basis, and project solutions that involve multiple disciplines. ■
